

This technical cross-section diagram illustrates the construction of a roof. The top layer is the roof deck, shown with a hatched pattern. Below the deck is a layer of insulation, indicated by a dotted pattern. The roof structure is supported by a central vertical post and four diagonal bracing members, all connected by a central horizontal beam. The roof is shown with a gabled profile, and the eaves are finished with a layer of insulation and a row of small plants or shrubs. The diagram is a black and white line drawing.
